## \* Education \*

What do you mean by Education? Is Education just limited to bookish information? How will you define education in your own words? Just think for it & know the real meaning of education.

Education is process of receiving or giving knowledge, this is what we know about education. But, from ancient times in India, education is the act of spreading or teaching values to the student and building up their personality. Education will act as the pillar of your building in the future. If the pillar is strong then only you can construct a strong building.

Today's education system is based just on bookish knowledge and is judged by the marks you obtain in the exams. Marks can never show the capability and potential of any student. Exams are conducted to test that, how much that child has grasp the concept but, today it has become like a competition. This mindset should be changed.

The values and ethics of every person matters more than their marks. Before being anything we should try to be a good person and improve ourselves.

Be happy and have valuable thoughts.

Thank You.
